

NEW Environmentally Friendly Mail Lite®

SUPERIOR PRODUCT PROTECTION THAT IS ENVIRONMENTALLY RESPONSIBLE

Sealed Air® is committed to sustainability by solving our customers' most critical packaging challenges with innovative solutions that leave our world, environment, and communities better than we found them.

We pledge to design and advance our innovative packaging solutions to be 100% recyclable or reusable by 2025.

 **NEW MAIL LITE® MAILERS ARE DESIGNED FOR RECYCLING***

SEALED AIR® Brand Mail Lite® recyclable mailers can be recycled by easily separating the paper mailer from the internal bubble cushioning. The non-PE coated paper can be recycled in the paper waste stream, the bubble can be reused as a bag or recycled in the appropriate waste stream.

This is just the beginning of the Mail Lite® evolution, with more product innovations to come.

SUPERIOR PRODUCT PROTECTION

With a mailer for every application, Mail Lite® are the only protective mailers lined with AirCap® bubble material to guarantee superior performance and product protection.

RESPONSIBLY SOURCED MATERIALS

In our environmental approach, we not only care about the shipping cycle of our customers' products, but we also care about making the most responsible use of natural resources — using FSC® certified paper from responsible forestry, and ensuring our co-extrude bubble contains a minimum of 60% recycled content.

A COST EFFECTIVE AND SUSTAINABLE ALTERNATIVE TO CORRUGATED BOXES

Compared to corrugated boxes, which are often used together with void-fill material, Mail Lite® protective mailers save time, energy, storage space, and typically save over 35% in postal costs.
